Application No.: 10/566,644 Docket No.: 12810-00197-US

Amendment Dated January 20, 2011

Response to Office Action dated July 20, 2010

## **AMENDMENTS TO THE CLAIMS**

1. (Cancelled)

2. (Currently amended) A process for the production of fine chemical comprising increasing or generating expression of at least one nucleic acid molecule in an organism or a part thereof, wherein the at least one nucleic acid molecule is selected from the group consisting of:

- a) a nucleic acid molecule encoding the polypeptide as depicted in SEQ ID NO: 2;
- b) a nucleic acid molecule comprising the nucleotide sequence as depicted in SEQ ID NO: 1; and
- a nucleic acid molecule which encodes a polypeptide having at least 95% sequence identity with the amino acid sequence of the polypeptide encoded by the nucleic acid molecule of (a) to (b) and conferring an increase in the amount of fine chemical in an organism or a part thereof;

by introducing the at least one nucleic acid molecule into an organism or a part thereof, growing the organism or the part thereof under conditions which permit production of at least one fine chemical in said organism or said part thereof, and recovering the at least one fine chemical produced by the organism or the part thereof, wherein the at least one fine chemical is selected from the group consisting of amino acids, carbohydrates, vitamins, organic acids, fatty acids, and carotenoids, and wherein the organism is selected from the group consisting of bacteria, algae, and plants.

- 3. (Cancelled)
- 4. (Previously presented) The process of claim 2 further comprising the following steps:
  - a) selecting an organism or a part thereof expressing the polypeptide encoded by the at least one nucleic acid molecule characterized in claim 2;
  - b) mutagenizing the selected organism or the part thereof;
  - c) comparing the activity or the expression level of said polypeptide in mutated organism or part thereof obtained in step b) with the activity or the expression of said polypeptide of the selected organism or the part thereof;

Application No.: 10/566,644 Docket No.: 12810-00197-US

Amendment Dated January 20, 2011

Response to Office Action dated July 20, 2010

d) selecting a mutated organism or a part thereof, which comprises an increased activity or expression level of said polypeptide compared to the selected organism or the part thereof;

- e) optionally, growing and cultivating the mutated organism or the part thereof; and
- f) recovering, and optionally isolating, the free or bound fine chemical produced by the mutated organism or the part thereof.
- 5. (Previously presented) The process of claim 2, wherein the activity of said polypeptide or the expression of said at least one nucleic acid molecule is increased or generated transiently or stably.

## 6-31. (Cancelled)

- 32. (Previously presented) The process of claim 2, wherein the at least one nucleic acid molecule encodes a polypeptide having at least 95% sequence identity with the amino acid sequence of SEQ ID NO: 2 and conferring an increase in the amount of fine chemical in the organism or the part thereof.
- 33. (Cancelled)
- 34. (Previously presented) The process of claim 2, wherein the organism is a plant.
- 35. (Currently amended) A process for the production of fine chemical comprising increasing or generating expression of at least one nucleic acid molecule in an organism a plant or a part thereof, wherein the at least one nucleic acid molecule is selected from the group consisting of:
  - a) a nucleic acid molecule encoding the polypeptide as depicted in SEQ ID NO: 2;
  - b) a nucleic acid molecule comprising the nucleotide sequence as depicted in SEQ ID NO: 1; and
  - c) a nucleic acid molecule which encodes a polypeptide having at least 95% sequence identity with the amino acid sequence of the polypeptide encoded by the nucleic acid molecule of (a) to (b) and conferring an increase in the amount of fine chemical in an organism or a part thereof;

Application No.: 10/566,644 Docket No.: 12810-00197-US

Amendment Dated January 20, 2011

Response to Office Action dated July 20, 2010

by introducing the at least one nucleic acid molecule into an organism a plant or a part thereof, and growing the organism plant or the part thereof under conditions which permit production of at least one fine chemical in said organism plant or said part thereof, wherein the organism is selected from the group consisting of bacteria, algae, non-human animals and plants at least one fine chemical is selected from the group consisting of essential amino acids, non-essential amino acids, modified amino acids, carbohydrates, vitamins, organic acids, fatty acids, and carotenoids.

36. (Cancelled)

37. (Previously presented) The process of claim 35, wherein the activity of said polypeptide or the expression of said at least one nucleic acid molecule is increased or generated transiently

or stably.

38. (Previously presented) The process of claim 2, wherein the at least one nucleic acid

molecule encodes the polypeptide as depicted in SEQ ID NO: 2 or comprises the nucleotide

sequence as depicted in SEQ ID NO: 1.

39. (Cancelled)

40. (Currently amended) The process of claim 35, wherein the at least one fine chemical is

selected from the group consisting of amino acids, carbohydrates, vitamins, organic acids, fatty

acids, and carotenoids an essential amino acid, a non-essential amino acid, or a modified amino

acid.

41. (Previously presented) The process of claim 35, wherein the at least one nucleic acid

molecule encodes a polypeptide having at least 95% sequence identity with the amino acid

sequence of SEQ ID NO: 2 and conferring an increase in the amount of fine chemical in the

organism or the part thereof.

42. (Previously presented) The process of claim 35, wherein the at least one nucleic acid

molecule encodes the polypeptide as depicted in SEQ ID NO: 2 or comprises the nucleotide

sequence as depicted in SEQ ID NO: 1.

43. (Cancelled)
